Instructor Notes

Go to the settings in Chrome, search for Proxy and click the Proxy Settings button and set your HTTP and HTTPS Proxy settings to localhost Port 13370.
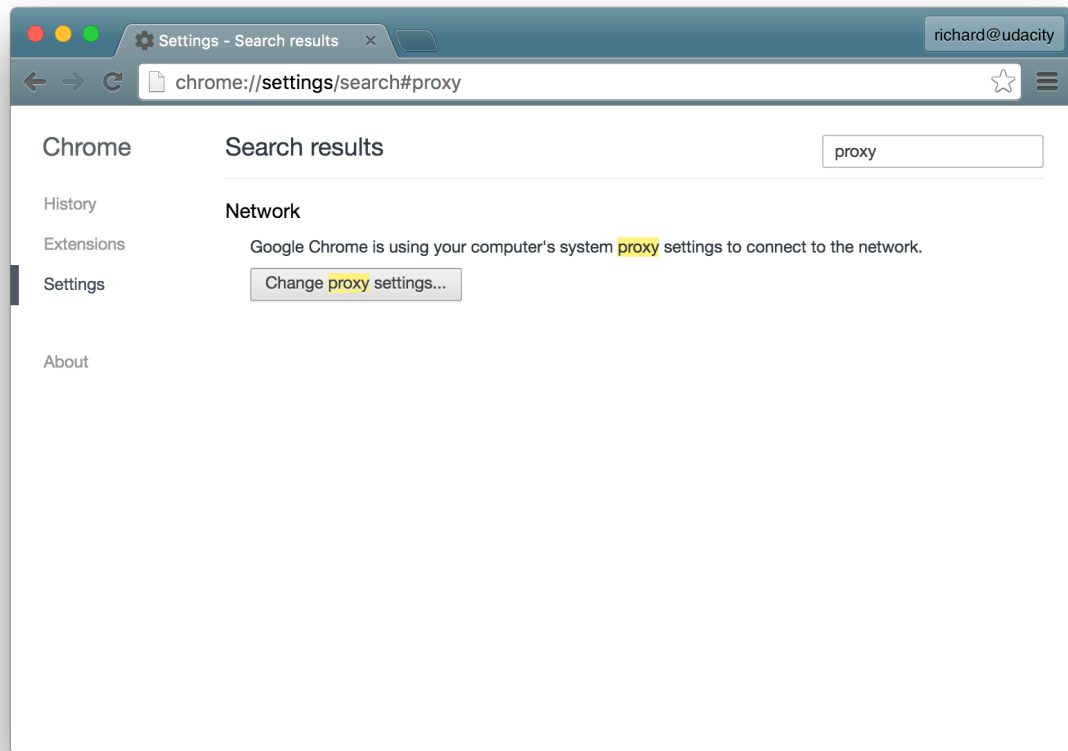

How to setup Chrome

On Mac:

1. go to Chrome's settings and search for "proxy" or copy and paste this into Chrome's address bar `chrome://settings/search#proxy`

## 2. click the "Change proxy settings..." button

3. enable the HTTP proxy

- set the Web Proxy Server to the `localhost` and the port to `8080`

4. enable the HTTPS proxy

- set the Secure Web Proxy Server to `localhost` and the port to `8080`

5. click "OK" to verify the changes to the Proxy settings
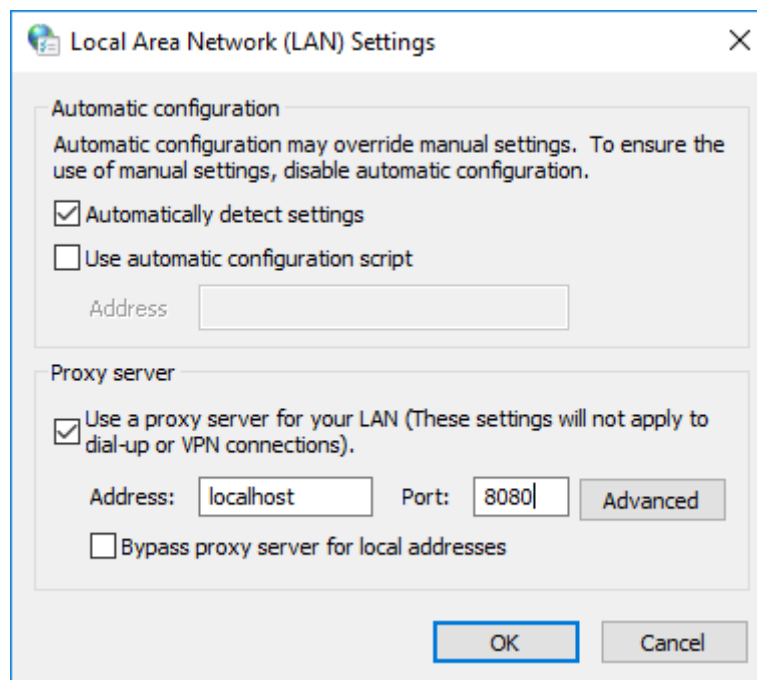

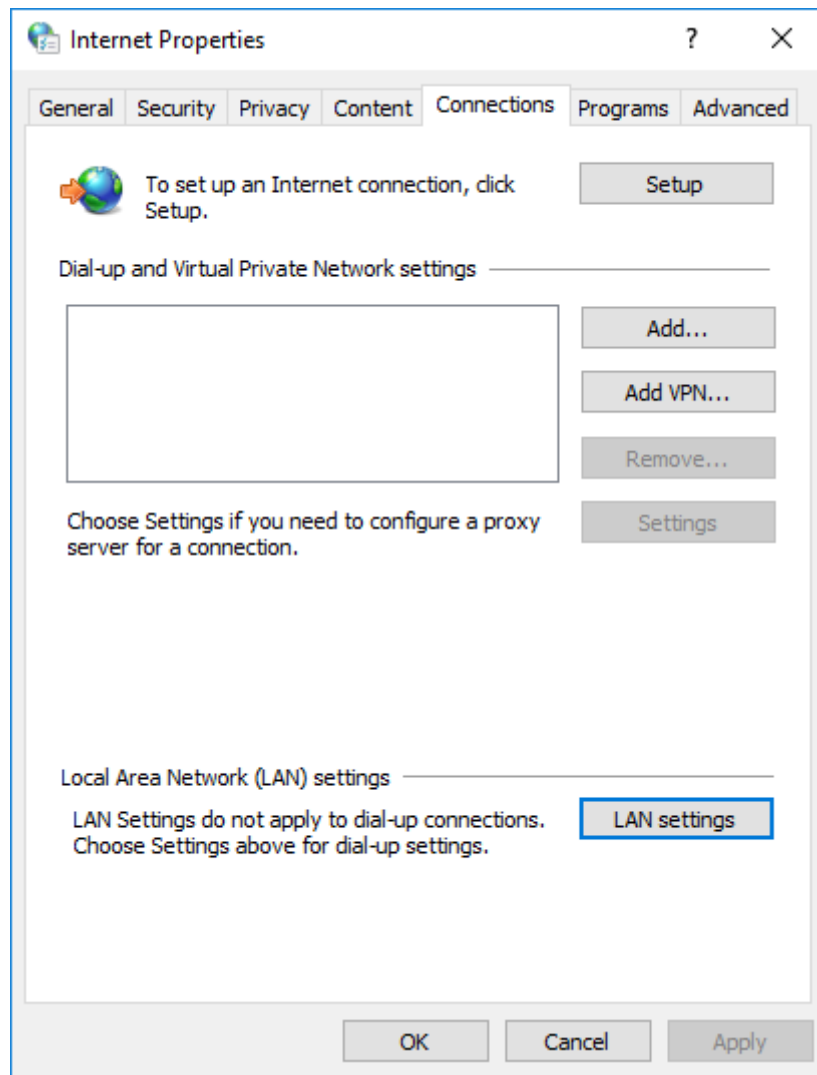

6. click "Apply" for these changes to take effect

On Windows:

1. Follow steps 1-2 from Mac instructions

2. Click on **LAN Settings** button

3. Enable **Use a proxy server for your LAN**

4. Set the **Address** to `localhost` and the **Port** to `8080`

5. click "OK" to verify the changes to the Proxy settings

6. click "OK" for these changes to take effect

Automatic configuration
Automatic configuration may override manual settings. To ensure the
use of manual settings, disable automatic configuration.
☑ Automatically detect settings
☐ Use automatic configuration script
   Address [   ]

Proxy server
☑ Use a proxy server for your LAN (These settings will not apply to
   dial-up or VPN connections).
   Address: [localhost   ]   Port: [8080]   [Advanced]
   ☐ Bypass proxy server for local addresses

                        [OK]   [Cancel]

On Linux:

On Linux, Proxy setting is done via the command line. Run the following commands

```
☰   $ export http_proxy=http://localhost:8080/
    $ export https_proxy=$http_proxy
    $ chromium
```
